From early spring until frost the perennial flowers present a wealth of interesting and beautiful material, while the annuals and summer-flowering bulbs add to the scope of the display from late spring until frost. Chrysanthemums climax the show just before hard freezing weather arrives.

The Most Delightful New
Hardy Garden Chrysanthemums
from Seed

1945 September Jewels HP

September Jewels start blooming early in September from seed sown in early spring and continue to give a magnificent display until the middle of October. They develop into well-rounded plants from 1 to 2 feet tall simply covered with masses of flowers which are resistant to light frost.

Many Glorious Colors

The large daisy-like flowers show a distinct tendency toward a double row of ray petals. They measure 2 to 3 inches in diameter and come in an extra-wide range of indescribably beautiful colors tending more toward delicate tones yet with sufficient of the more rugged shades to give a rich color balance. They are excellent for garden display and unsurpassed for cutting. Of easiest culture and the plants will last for many years.

Pkt. 60c.

Explanation of Symbols

The symbols used throughout this book are bound to help you with your garden planning. They make it easy to tell at a glance the character of the plant and their adaptability to various growing conditions.

Ⓐ=**Annual.** Annual flowers complete their life circle within one growing season. They must be sown every year.

Ⓑ=**Biennial.** These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.

HHP=**Half-Hardy Perennial.** These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

HP=**Hardy Perennial.** These last for several years, withstanding considerable frost provided the soil is well drained.

TP=**Tender Perennial.** Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are showy bedding plants for a summer and fall display.

§=**Climbing Plants.** Climbing and trailing plants which are best grown with a support on which they can climb.

△=**Suited to Rock Garden.** Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

◉=**Suited to Semi-Shade.** Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

●=**Suited to Shade.** Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

+ Seeds marked with a + often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.
